

https://github.com/microsoft/azure_arc/blob/main/azure_arc_servers_jumpstart/vmware/winsrv/terraform/main.tf

What's the difference between windows AD vs Azure AD?

what is queue and table and service bus

services in azure

How we store certificates In key-valut

What's the command for creating VM from cli

What are the roles in azure

How will you authenticate linux vm without username/password

What are the two diff type of storage access key types? And which one has 0 downtime

What is storage access key

What is diff bw queue vs service bus

Azure functions

Can we create aks cluster with windows?

Can we have multiple namespaces in single node pool?

Layers of docker

Maven snapshot vs release

Maven deploy

While building code from pipeline how it will authenticate to nexus for downloading artificats.

=====oracle=====

Diff b/w clusterIp vs healless

Diff b/e nodeport vs loadbalancer

Exaple if I have application with 3 replications sets- and one of the pod goes down which I don't want to comeuppance automatically

Git : i have changes in my working dir which mistakenly I have made changes and want same changes into diff branch

Sebasten in linux

Why we have to one run command with multiple command ? Advantage and diff b/w having multiple commands

I have docker file which has 1GB of base from image and I want the overall image should be in 1GB.

How can we compress docker image

I have machine where I don't have access for other machine but I have access of root can still access to that machine

What is the use of export variables in unix

I have 7 replica sets of deployment and I have 3 nodes. I have to deploy 40% of

the pods to first node and 50% to another and 10% to last node?
 Nodeselector vs node affinity vs node anti affinity
 I have two 2 nginx servers running on same port ? How will u access both in docker?
 How can create configmap with pvc
 Pvc vs pv
 Types of docker volumes
 What's the default decode for secrets.
 If I have 2 configmaps with same key which one will be picked? Whats the priority ?
 How will you use config as file or environment variables?
 Terraform version what's the use of it?
 I am creating 5 hosts using terraform and out 5 one of them is not accessible and how can u create new host ?
 Is remote state files editable ?
 When you try to access google from linux? How it connects ?
 Sque topology

=====previous=====

- Existing storage account is there and it has some rules? Writing terraform script can we append new rules to it? I said yes, we can import the existing resource and add new rules
- i have a storage account and how to create a rule allow only particular IP to that storage?
 - \$. how we use Key-value secrets in terraform scripts?
 - %. How to add user credentials in Jenkins and how u manage access ?
 - Using LDAP
 - &. Ingress 7023004453

-
- AKS cluster security best practices -> azure policy and docker images we run with non-root user.
 - Best way to secure secrets
 - \$. API gateway -
 - %. Azure traffic manager - front end - load balance - api gateway &.
 - Depends on in terraform
 - 6. Modules - why we need to have modules
 - (. When u have global module and if u want to make changes how u do ? We can take copy of it and modify in local or we can have versioning of it and refer to new version.
 -). How u create n/w bridge b/w hybrid cluster.
 - *. How can we set static ip for pod - we can set it from portal if it is VM or if it is pod we can have service yams with load balancer along with

loadbalancerIP with static IP

1+. How u pull remote changes to local

- 3 tier app - want to access only UI from out side.
- I have 20 resources where I wanted to create 15 for prod and 20 for non-prod . How can we do that ?

1\$. What is null resource

Express route - van - vpn by default any company has own express routes for hybrid clouds and when we try to connect express route which will redirect to cloud backend route to get interact.

Hub and spoke - in hug

1. when we have 3 Vms and how will u maintain disaster recovery ? - Azure site recovery

2) aks cluster upgrade ?

Upgrading AKS version with blue-green deployment(I)

=====

If we have 2 web servers and how to create private network b/w them? Docker swarm vs k8

CDN in k8 - contentment delivery n/w

Why we get performance deg in web apps ? Null resource in terraform?

git Sqashing

Git pull vs git fetch Git revert

Container networking model

Why we use NSG how they work?

Terraform architecture

how will u upgrade terraform version What is azurerm?

Loadbalnce what it will do?

How will u to specific ip to give access to our app? And how nag works
